MEMO FOR: RECORD

SUBJECT: Skagit County Flood Insurance Study - Corps Projects

1. At a meeting with Skagit County on 4 June 1976, Mr. Lloyd Johnson Skagit County engineer, indicated that the Corps of Engineers was planning to raise levees in the Skagit Delta, and that \$100,000 had been included in a recent congressional bill. He expected work to be started before completion of our study in 1979.
2. Frank Urabeck told me that levee work was authorized via a 1965 report on the Skagit River, with the proviso that upstream storage is provided first. Now that the Baker Lake storage project is authorized, the levee project will be revived. Levee details are included in the Baker Lake report of June 1975.
3. We must check on project schedules to determine whether our study should reflect project effects.
